220x307 mm

**The structure of the .psd tutorials:
ALWAYS SHOULD LOOK LIKE THIS:**
(please follow our rules)

Your tutorial should include:

- **one text file** with :
TITLE:
INTRODUCTION.....(around 626characters).....
ABOUT THE AUTHOR(short note).....
STEPS DESCRIPTIONS + TITLES
-STEP(number): TITLE of the step (e.g Masking fur)
-STEP'S DESCRIPTION: 428-632 characters.
- **screenshots** (each as a separate file, size: 74x40mm, transparent background/.jpg/.png/.tiff CMYK)
- **final effect (A4 format, 300DPI, in a tiff format)**

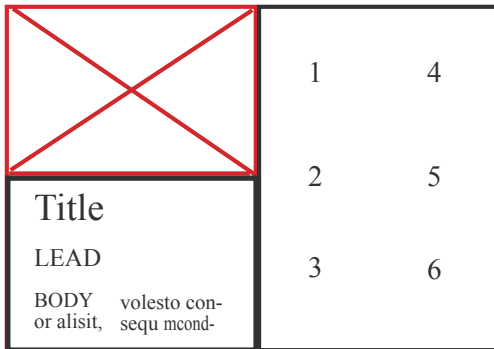

DO NOT FORGET:

• source photos (EVERYTHING what you use to make the terminal effect (e.g terminal effect contains: head of the dog, tail of the squirrel, and body of the lizard, and the background - so we need 4 source photos, unless you used more) terminal effect should have 300DPI and should be around 180/300mm). Of course the source files must be yours or has right license.

Those source files will be given on the CD to our readers with the special license that all of these are only for practicing purposes.

- screenshots (each as a separate file)
- final effect (A4. 220x307mm with bleeds,300 DPI, .tiff)
- about the author + photo (if you want us to show it)

2

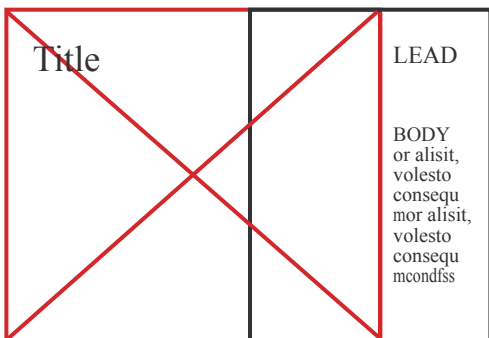

220x174 mm

These are only for practicing purposes.

- screenshots (each as a separate file)
- final effect (A4. 220x307mm with bleeds,300 DPI, .tiff)
- about the author + photo (if you want us to show it)

3

310x307 mm

Let me know when can I expect your outline, and please be sure that your materials used to this project are yours not anybody else's!

EXAMPLE of the step.

8: TITLE: Smooth skin – can't we make it faster?

It's possible to make a skin smoother in a quicker way. Duplicate face layer, and go to *Filter>Noise>Dust and Scratches* – set *Radius* to about 17 and *Threshold* between 6 and 9. Then use the layer mask to remove unwanted parts like eyes, eyebrows etc, using soft brush with 100% opacity. Then try to change the layer opacity until you mget what you want – smooth skin. It's good technique to remove small amount of hair around lips or on the nose, but if you want to achieve professional looking skin – use the Clone Stamp Tool.
